

BEAUTY-MASSAGE TREATMENT AGAINST THE MUSCULAR TENSION

GA.IA is a precious wood couch, born from a very careful artisan job, covered with a soft mattress, which uses the healthy effects of the acoustic vibrations in order to produce a restful massage all over the body, which creates a relaxing effect on contracted and rigid muscular areas. This characteristic make it a great instrument for the body care in the specialized SPA center.

The GA.IA couch produces in a natural way some acoustic harmonious vibrations whit whom our body resonate. Laying on GA.IA is like diving your body in a bath of reinvigorating sound vibrations. The main effect is a deep muscular and mental relax. By acting on a specific part of the body, that resonate with a specific acoustic vibration – the most suitable to reproduce this resonance – you can get important relaxing effects.

The acoustic vibration penetrates through the skin and creates a massage, according to the frequency used, on specific body's parts, from the lower limb to the cervical, going through the thoracic and lumbar area, with instant and long lasting effects for the muscular relaxing.

The sound vibrations are specific for each part of the body: the head, the cervical, shoulders, the back, the chest; the lumbar, abdominal area and for the lower limb.

It has to be clarify that they are not mechanic vibrations, but sound, so they are not invasive and have no side effects on the articulations and on the bones-structure, that, on the contrary, take advantage from this acoustic massage.

The GA.IA couch allows a treatment of total ease for the client. The vibrations that it perceives with the body produces a rolling effect and relaxing massage (some patients fall asleep). The noise of the vibration can be muffled with a music studied appropriately to integrate with the noise leading of the vibration, that becomes similar to that of the backwash of the sea on the beach.

The studies done by the researcher of DIREDI SRL, coordinated by Doct. Diego

Kriscak, led to the realization of a National and European patent, that recognize the innovation of GA.IA. The couch has got a EC type-examination certificate.

The applications of GA.IA are connected to the research of Olav Skille in the 70's in Norway, which led to the development of the Vibroacoustic Therapy (VAT), amply used for medical reasons in the Anglo-Saxon lands.

The scientific principal at the base of the relaxing effects of GA.IA has been deeply studied from the physics, and is the one of the *acoustic resonance*: if we let a tuning fork vibrate nearby another tuning fork, also the second one will start to vibrate.

The sound wave produced by GA.IA penetrate through the skin and envelop the muscles, on which will be created sympathetic or reflexed resonance, that together produce a deep massage, that spreads from the inside to the outside.

The client is stretched onto the GA.IA couch and perceives the sound through the thin mattress and the pillows. The operator starts up the program. The client remains on the couch for half an hour in a comfortable position and if they want they can listen to the relaxing music headphones.

The scientific efficacy of GA.IA has been step by step combined with the design studies, rigorously Italian, that have led to the aesthetic creation of an harmonious product, elegant and functional together.

GA.IA is the new and perfect instrument for any well-advanced beauty center that want their customer to dive in a sound bath with deep and real relaxing effects, both muscular and mental.
